

Milk Hill 2001 - Final Mathematical Conclusion

Controlling result after the completed 409-circle reconstruction and all stated tests.

Founder: Lawrence Herber | Geometric Intelligence Engine (GIE) | Revision: 14 August 2026

Physical reconstruction

Complete. The register contains 409 circles: one center plus six arms of 68. No circles are treated as missing. The 47 geometry-derived arm entries are included in the completed register and preserved only as an audit/provenance category.

Scale validation

The completed outer envelope is 393.49995 ft from center versus the required 393.50000 ft radius of a 787-ft formation, a residual of -0.00005 ft. The diameter range includes the 40-in minimum and 72-ft maximum controls.

Spiral / golden ratio

The golden logarithmic reference is $b_{\phi} = 0.3063489625$. Per-arm fitted b values are 0.023179, -0.075657, 0.156424, 0.021577, -0.004199, -0.067891. The associated R^2 values are near zero, so this particular radius-versus-angle golden-spiral model is not supported.

Fibonacci diameter progression

The direct recurrence d_n approximately $d_{(n-1)} + d_{(n-2)}$ fails on all six arms under the stated NRMSE test. Arm NRMSE values are 1.9453, 2.2759, 2.0969, 1.9647, 1.9183, 1.9307.

Binary and five-bit conversion

The fixed current-versus-prior diameter rule produces 402 bits. These yield 80 complete five-bit groups plus two trailing bits. The direct A1Z26-style interpretation is: SFKBOJHWXFQIGLATVV<29>YCRYSLPAIL<27>JKIKNLEST<28><27>JFARWK P<27><28>QKJIDQOEADISIJI<28>ZVGNYJ<27>IML<28> E

Letter rearrangement

Systematic geometry-preserving reorderings were tested and recorded. None produced a stable plain-English sentence. Some arbitrary candidate phrases can be assembled from the letter inventory, but anagrams are not unique and therefore are not treated as a verified geometric decode.

Controlling conclusion

The completed physical reconstruction is mathematically consistent with the controlling 787-ft / 72-ft / 40-in measurements and the 409-circle, six-arm structure. The binary conversion is reproducible under the stated rule. The tested Fibonacci, golden-logarithmic-spiral, and plain-English five-bit message hypotheses are not supported by this completed dataset under the explicit rules used. This conclusion records both successful and unsuccessful tests so the chain can be independently audited.
